

Configurações e passos iniciais

O programa abre vazio. Primeiro é carregada a sessão do *template*, e em segundo passo são carregadas as configurações de *build*.

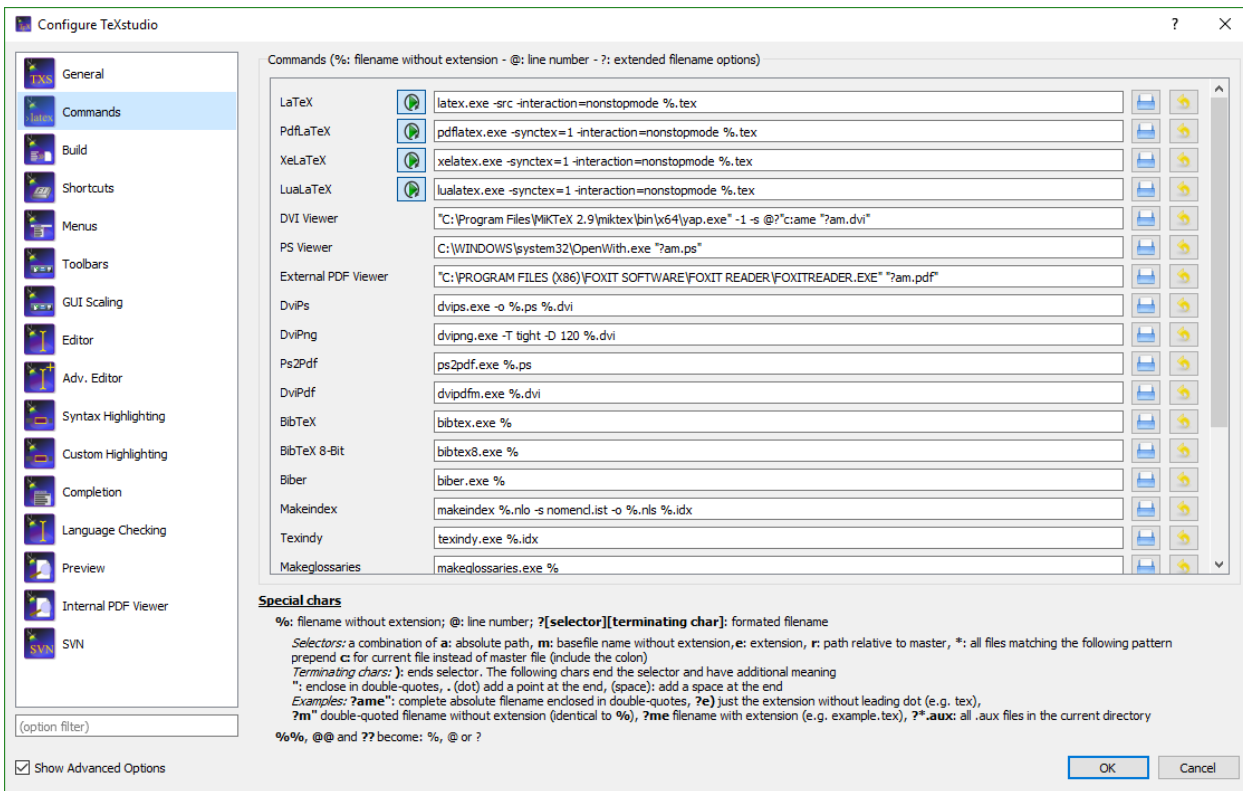

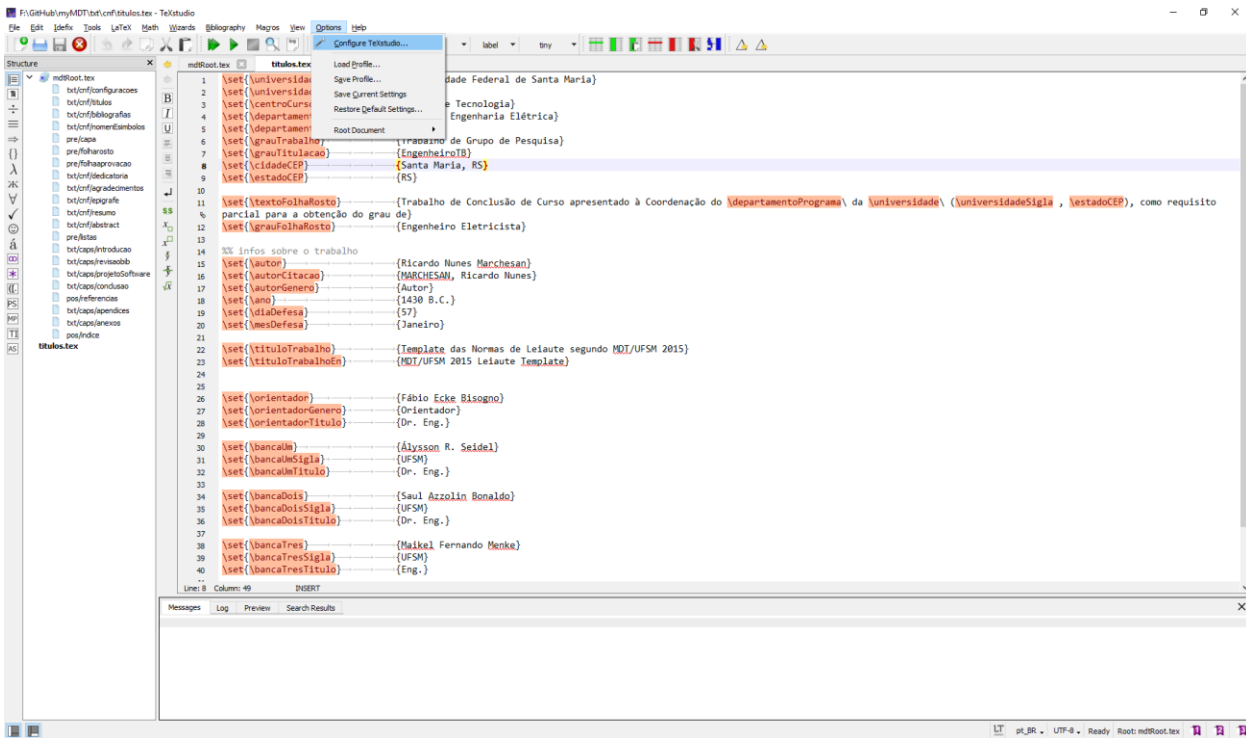

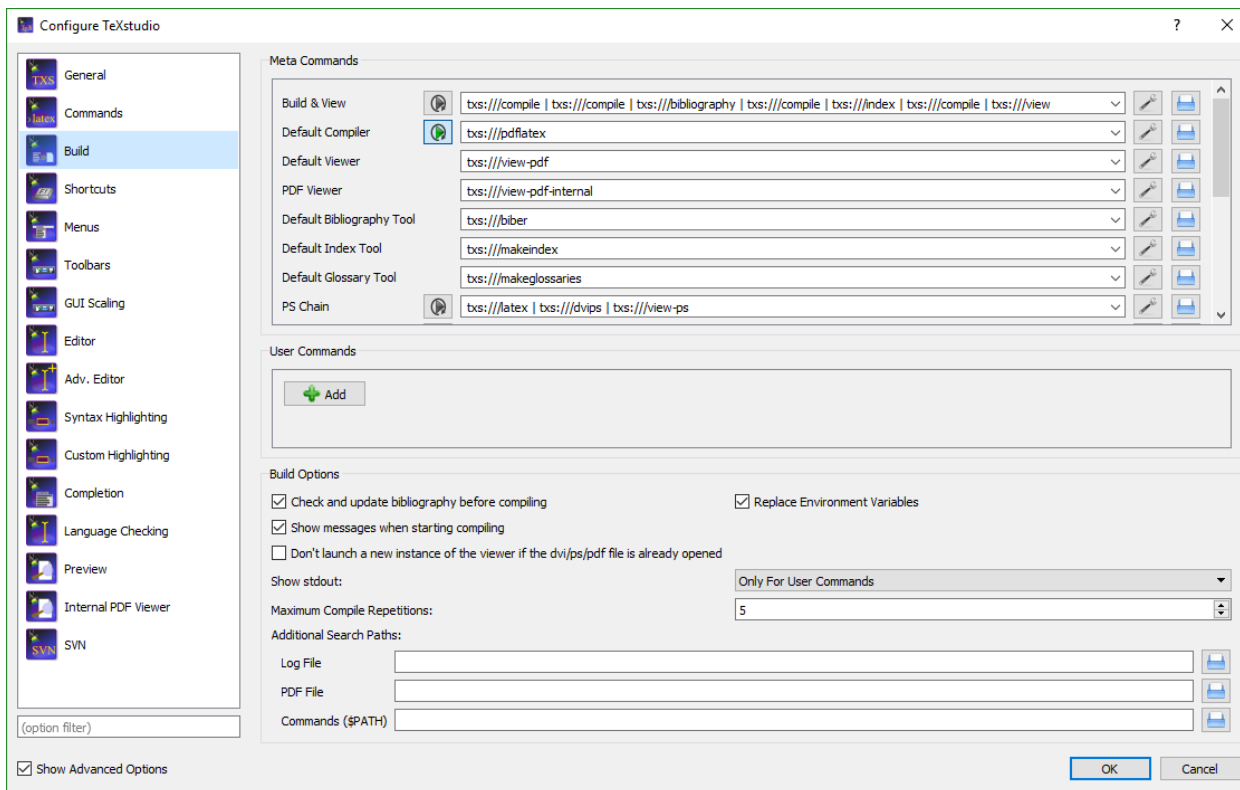

E em seguida, as configurações por meio de *Load Profile*

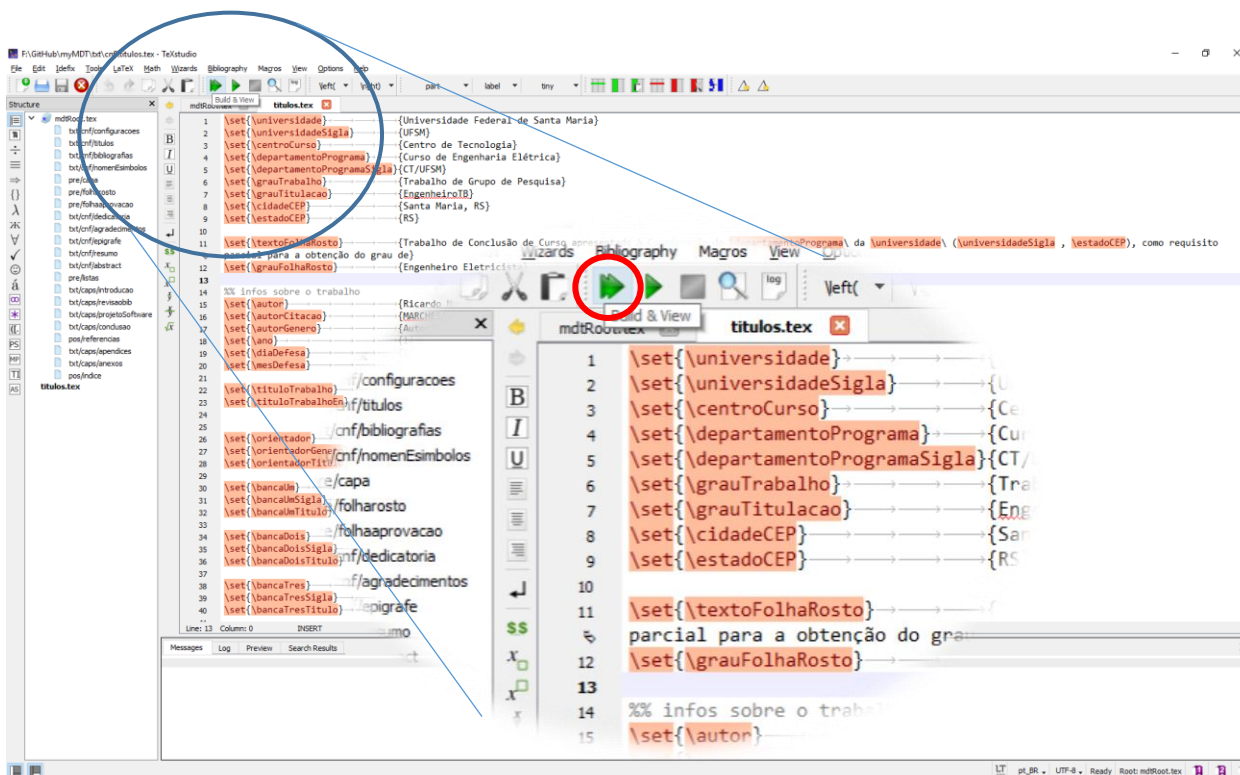

Para conferir, as configurações corretas de *build* devem estar como as figuras a seguir:

Por último, inicia-se o processo de *build*

E um resultado com sucesso, no *log* terá *Process exited normally*
